QUALIFICATIONS

Languages: Java, Python, C, C++, JavaScript, TypeScript, HTML, CSS

Developer Tools: Git, GitHub, VS Code, Node.js, Vite, Linux, Bash

Libraries: Java AWT, Java Swing, pandas, React, Axios, Cheerio

PROJECTS

Tetris Clone (Biquardis) | C++, Make, Valgrind, Software Development Lifecycle | [GitHub](#)

- Collaborated in a team of three to design and develop a Tetris game, adhering to the **Software Development Lifecycle** (SDLC) phases, including planning, **UML** modeling, implementation, testing, and deployment
- Utilized Object-Oriented Programming (OOP) principles to create scalable software, implementing design patterns like **Observer**, **Decorator**, and **Factory** to ensure modularity and maintainability
- Performed thorough manual playtesting to verify game mechanics, such as block movement, collision detection, and scoring, identifying and resolving issues to enhance performance and user experience

Finn - Financial Tracker | React, TypeScript, MySQL, AWS, Git | [GitHub](#)

- Developed a financial tracking app to help users categorize and analyze expenses, offering a clear view of personal spending and savings
- Built an interactive, user-friendly dashboard to provide clear transaction summaries and financial insights
- Integrated with a **MySQL** database hosted on **AWS RDS** to support secure data storage and retrieval

Stock Scraper | React, TypeScript, Express, Axios, Cheerio, REST APIs, Git | [GitHub](#)

- Developed a full-stack stock scraping tool using **Node.js**, featuring a responsive front-end built with **React** and **Tailwind CSS**, allowing users to view the information from the scraped stocks
- Implemented automated stock data retrieval system using **Cheerio** and **Axios**, designed to concurrently fetch up to **100** stocks from **Yahoo! Finance**, leveraging **Promise.all()** for optimized speed and efficiency
- Implemented a **REST API** with **Express** for efficient communication between the front-end and back-end

2D Game | Java, Javadoc, Git | [GitHub](#)

- Designed and developed a top-down 2D game, demonstrating proficient in game development and a deep level of Java's understanding
- Optimized game performance to efficiently handle over **10,000** entities, showcasing expertise in performance tuning within game development
- Applied **Object-Oriented Programming** principles to streamline and enhance entity development, contributing to the efficiency and maintainability of the game codebase

EXPERIENCE

Programming Tutoring

Nov. 2022 – Jun. 2023

Forest Height Collegiate Institute

Kitchener, Ontario

- Guided fellow classmates through fundamental programming concepts in **Java** such as **debugging**, **OOP**, etc.
- Taught students programming using simplified analogies and examples
- Fostered practical problem solving skills through explaining and resolving bugs

Cashier – Waiter

Sep. 2021 – Jun. 2023

Pho Sunrise

Kitchener, Ontario

- Demonstrated **communication skills** through effective customer interactions
- Effectively handled **high volumes** of customer transaction to ensure smooth customer flow during peak hours
- Being able to work under time and quality pressures

EDUCATION

University of Waterloo

Waterloo, Ontario

Candidate for Bachelor of Honours Mathematics

Sep. 2023 – Present
